### **DETAILED ACTION**

The amendment filed on September 9, 2004 has been entered. Claims 4 and 7 are cancelled, claims 1, 3, 5-6 and 8-9 are pending.

#### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1, 3, 5-6 and 8-9 are rejected under 35 U.S.C. 103(a) as being unpatentable over Nishishita in view of Sugawara et al.

Nishishita discloses all the claimed limitations except a change in the cross-sectional flow area of a circulation space.

Sugawara et al discloses a heat exchanger comprising a plurality of distribution parts including two overlapped plates 13, 23 defining paths 15, circulation spaces defined by openings 22 connected at ends of the refrigerant paths decreasing in cross-sectional flow area in series for the purpose of providing uniform distribution of the fluid to improve heat exchange.

Since Nishishita and Sugawara et al are both from the same field of endeavor and/or analogous art, the purpose disclosed by Sugawara et al would have been recognized in the pertinent art of Nishishita.

It would have been obvious at the time the invention was made to a person having ordinary skill in the art to employ in Nishishita openings decreasing in cross-sectional flow area

in series for the purpose of providing uniform distribution of the fluid to improve heat exchange as recognized by Sugawara et al.

Regarding claims 5 and 8-9, it would have been obvious to one having ordinary skill in the art at the time the invention was made to employ openings decreasing in cross-sectional flow area in series in the second continuous inlet space, since it has been held that mere duplication of the essential working parts of a device involves only routine skill in the art. *In re Harza*, 274F.2d 669, 124 USPQ 378 (CCPA 1960). Achieving uniform distribution of the fluid to improve heat exchange is equally advantageous in the first and second blocks of the heat exchanger.

#### ***Response to Arguments***

The rejection in view of Torigoe et al and Aikawa is withdrawn.

Applicant's arguments have been considered but are moot in view of the new ground(s) of rejection.

#### ***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period

Art Unit: 3753

will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
